About me

When I was young, I was crazy about playing computer games and wanted to use computers professionally. So, I chose to learn Computer Science after I finished high school. At the time I started to code, I found out that the emotion, I get every time after I fixed bugs is priceless. That's the reason I decided to be a software developer in my career. I have creative ideas in solving problems, always energetic and eager to learn new skills and apply them. I am flexible and reliable with team members and can speak English fluently.

Achievements

- Awarded 2nd price in Pre-Higher National Certificate (HNC) at Info Myanmar University (IMU) – 2016
